CORE EXPERTISE

- NestJS
- PostgreSQL
- MongoDB
- Redis
- Elasticsearch
- RabbitMQ
- Docker
- Microservices
- Git
- Linux

EDUCATION

B.Sc. in Software Engineering
Payame Noor University
2018 - 2024

PROFESSIONAL SUMMARY

Senior Backend Developer with **6+ years of experience** designing scalable systems with **NestJS, PostgreSQL, MongoDB, Redis, RabbitMQ, and Elasticsearch**. Led backend teams and delivered high-load ticketing and trading systems, with strengths in system reliability, search, and technical leadership. Progressed from frontend development to senior backend roles, bringing a broad product perspective.

PROFESSIONAL EXPERIENCE

Senior NestJS Developer

May 2025 – Present

Daric Data Processing - Tractor FC

- Engineered a **high-concurrency stadium ticketing system** serving **300,000+ tickets**, using Redis/Lua atomic seat locking and availability bitmap caching.
- Integrated provider failover, OTP verification, deposits, withdrawals, refunds, cashback, and payment gateways across **KYC, hotel reservation, and digital wallet services**.
- Designed a multilingual **Elasticsearch** search system from scratch; tested across **1,000+ indices** and returned results in **200–300 ms**.
- Introduced S3 file management with multipart/resumable uploads, image optimization, and legacy asset migration. Added optional admin-selected **PNG, JPG, and WebP conversion** plus **2 watermark styles**: small (**9 positions**) and banner (**5**).
- Migrated a core ticketing service from MongoDB to a modular PostgreSQL microservice architecture, reducing response time by **up to 40%** by removing unnecessary modules and centralizing relationship management; added versioned migrations and Docker deployments.

TECH STACK NestJS, PostgreSQL, MongoDB, Redis, Lua, RabbitMQ, Elasticsearch, S3, REST APIs, Docker, Jest/Supertest, Pino, Elastic APM, Cockatiel, Server-Sent Events (SSE)

Backend Developer to Backend Team Lead

May 2020 – Feb 2024

Webline Studio

- Progressed from Backend Developer to Backend Team Lead across fintech, cryptocurrency exchanges, renewable energy, telemedicine, and service automation platforms.
- Shipped core **Isolarfarm** features for wallet transactions, installment scheduling, profit distribution, ROI calculations, payment processing, and inventory management.
- Delivered trading and wallet systems for **101Bitcom and Akocoin**, including a trading core handling **2 million transactions per hour** with order listing, buyer–seller matching, and failure controls in a high-load environment; with multi-chain support, exchange integrations, real-time feeds, WebSocket updates, and KYC.
- Managed a team of **5 backend developers** and oversaw architecture design, code reviews, onboarding, technical documentation, and coordination with product, frontend, and DevOps teams.

TECH STACK Node.js, Express.js, NestJS, MySQL, MongoDB, Redis, TypeORM, Mongoose, BullMQ, Docker, REST APIs, Microservices, Socket.IO

PROFESSIONAL EXPERIENCE (CONTINUED)

Web / WordPress Developer

Jun 2018 – May 2019

Zilen

- **WordPress plugins (Feb 2019 – May 2019):** Authored custom PHP plugins for management, categories, and menus, and tailored existing plugins to project requirements.
- **Offerings Collector (Oct 2018 – Dec 2018):** Created a PHP/Laravel donation management app for a charity, supporting anonymous cash and in-kind gifts and admin activity photos and reports on their use.
- **Quran Reading (Aug 2018 – Sep 2018):** Developed a PHP/Laravel recitation app with selectable pages, verses, and paras; incomplete selections moved into smaller units, and users could record completion.
- **Student Ranking System (Jun 2018 – Aug 2018):** Implemented PHP/Laravel student, teacher, and admin panels with authentication, class and user management, random class participation, archived meeting summaries, project uploads, score management, and student rankings.

TECH STACK PHP (Object-Oriented), Laravel, WordPress, MySQL, REST APIs, MVC, JavaScript, jQuery, HTML/CSS, Git
